***Examiner's Amendment***

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it **MUST** be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with David Boundy on June 15, 2006.

The application has been amended as follows:

1. (currently amended) A method, comprising:

during a profiled interval of an execution of a program on a computer, recording profile information describing the execution, the program being coded in an instruction set in which instructions are not all of the same length, and in which the length of an instruction depends on a processor mode not expressed in the binary representation of the instruction,

the recorded profile information containing information ~~sufficient to permit~~ permitting, without reference to the binary representation of the program, reliable inference of the address of the last byte of a multi-byte control transfer instruction.

19. (currently amended) A computer, comprising:

an instruction pipeline configured to execute instructions of the computer, the instructions being instructions of an instruction set in which instructions are not all

of the same length, and in which the length of an instruction depends on a processor mode not expressed in the binary representation of the instruction;

profile circuitry configured to detect, the occurrence of profileable events occurring in the instruction pipeline, and to direct recording of profile information describing the detected profileable events, the recorded profile information containing information ~~sufficient to permit~~ permitting, without reference to a binary representation of a profiled program, reliable inference of the address of the last byte of a multi-byte control transfer instruction.

### ***Allowable Subject Matter***

2. The following is an examiner's statement of reasons for allowance: the closest prior art reference or record is the patent to Heisch, cited in the previous action. However, the reference fails to teach or suggest the features of permitting, without reference to the binary representation of the program, reliable inference of the address of the last byte of a multi-byte control transfer instruction in an environment in which instructions are not the same length.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
